CREATING REPOSITORY IN IBM CLOUD:

The screenshot shows the IBM Cloud Container Registry interface. A modal dialog titled 'Create repository' is open, providing instructions and commands for creating a new repository. The background shows the 'Repositories' page with a search bar and a 'Create' button.

Create repository

1. Tag an image to point to this registry. Choose a local image, target namespace, and target repository.

```
docker tag <local_image> au.icr.io/<my_namespace>/<my_repo>
```

2. Push the tagged image.

```
docker push au.icr.io/<my_namespace>/<my_repo>
```

The background interface includes a sidebar with 'Container Registry', 'Quick start', 'Namespaces' (1), 'Repositories' (0), 'Images' (0), 'Trash' (0), and 'Settings'. The main area shows 'Repositories' with a 'Location' filter set to 'Sydney' and a 'Create' button.

UPLOAD IMAGE TO IBM CONTAINER REGISTRY:
